Contributions should, preferably, be sent to a member of the Advisory Editorial Board who is familiar with the research reported, or to one of the Editors:

L. JANSEN
Editor of Chemical Physics Letters
c/o Institut Battelle
7, route de Drize
CH-1227 Carouge-Geneva, Switzerland

R.B. BERNSTEIN
Editor of Chemical Physics Letters
Department of Chemistry
Columbia University
New York, N.Y. 10027, USA

in which case authors from the Western Hemisphere are requested to send their manuscripts to the USA Editor.
Important: please adhere to instructions to authors, to be found on the last page of each volume.

Chemical Physics Letters is published semi-monthly. The subscription price per volume is Dfl. 195.00 (approx. $80.00) excluding Dfl. 15.00 (approx. $6.00) postage. Claims for issues not received should be made within three months of publication. If not, they cannot be honoured free of charge.

Subscriptions should be sent to the publisher: NORTH-HOLLAND PUBLISHING COMPANY, P.O. Box 211, Amsterdam, The Netherlands, or to any subscription agent or bookseller.

THE HYDROGEN BOND

Recent Developments in Theory and Experiment

edited by **P. SCHUSTER,** Universität Wien, **G. ZUNDEL,** Universität München and **C. SANDORFY,** Université de Montréal.

1976 1520 pages (in 3 volumes) ISBN 0-7204-0315-4
Price: US $193.75/Dfl. 450.00 per 3-volume set

This excellent three-volume work provides, for the first time, a truly comprehensive survey of the major developments in experimental results and theory of hydrogen bonding. Well-written and thoroughly documented, this up-to-date work by an international group of experts contains a survey not only of the field's existing literature, but of original work being published for the first time as well.

"It has been a privilege and pleasure to review this treatise... I personally found the studies of hydrogen-bonded systems by X-ray and neutron diffraction studies particularly fascinating... Although the distinguished contributors number almost forty and come from different nationalities, these volumes are written in excellent English and overlap between chapters is minimal. The editors must be congratulated ... The volumes are beautifully produced... I was instructed and stimulated by reading these volumes."

NATURE

"This work is bound to become a standard reference for those interested in hydrogen bonding in particular and in molecular association in general."

JOURNAL OF THE AMERICAN CHEMICAL SOCIETY

"Any worker in the field of hydrogen bonding must somehow contrive to gain access to these three volumes."

CHEMISTRY IN BRITAIN

Volume I - Theory

Energy surfaces of hydrogen bonds, calculations of vibrational spectra and proton motions are among the subjects extensively covered in the introduction and 6 chapters that comprise this volume. Model studies on proton correlations, dynamics of proton networks and hydrogen bond statistics are also explored in equal depth.

Volume II - Structure and Spectroscopy

This volume is devoted to the experimental results on structure and stereochemistry of hydrogen bonds in crystals and liquids.

"Articles which seemed to us outstanding are... in Volume II, those by Scandinavian authors (Crystal structures of HB systems, and The hydrated proton) and Hadzi, Bratos, Williams and Blinc (Vibrational and nmr spectroscopy)."

CHEMISTRY IN BRITAIN

Volume III - Dynamics, Thermodynamics and Special Systems

This final volume surveys the experimental results on hydrogen bond dynamics as studied by incoherent neutron scattering, dielectric methods, spin-lattice and chemical relaxation techniques. Particular attention is focused on the results obtained from infrared and NMR spectroscopy.

PHYSICS REPORTS

a special discount offer - for private use only!

UPDATED • OCTOBER 1977

From the publisher:

Over the past few years, the journal PHYSICS REPORTS (Physics Letters C) has developed into one of the leading review journals for various branches of physics. To date, some 180 review articles have been published.

In the past, the journal was regarded primarily as a "library journal" by virtue of the fact that the publisher was obliged to charge a relatively high price for a single issue, owing to the individual postage, handling and invoicing charges involved.

In order to enable the research worker or graduate student to buy his own copy of a particular REPORT, the following scheme has been devised: North-Holland Publishing Co. is prepared to make single issues of PHYSICS REPORTS available to individuals only at the price of US $4.00, US $5.00 or US $6.00 (depending on the number of pages), providing that combined orders of at least US $50.00 are placed with us, and a cheque for the correct amount is enclosed with the order.

In effect, this means that you and your colleagues may combine your separate orders, as long as the collective order amounts to US $50.00 or more.

ATOMIC AND MOLECULAR PHYSICS:

- Semi-classical approximations to heavy ion scattering based on the Feynman path-integral method (T. Koeling and R. A. Malfliet) Vol. 22 No. 4 US $4.00
- Positronium: a review of the theory (M. A. Stroscio) Vol. 22 No. 5 US $5.00
- Correlation Energies in Atoms (C. S. Sharma) Vol. 26 No. 1 US $5.00
- (e, 2e) Spectroscopy (I. E. McCarthy and E. Weigold) Vol. 27 No. 6 US $6.00
- Electronic States in Solids investigated by means of synchroton Radiation (E. E. Koch, C. Kunz, B. Sonntag) Vol. 29 No. 3 US $6.00
- Electron Scattering by Atoms at Intermediate Energies I Theoretical Models (B. H. Bransden and M. R. C. McDowell) Vol. 30 No. 3 US $6.00
- AC Stark Effect and Multiphoton Processes in Atoms (J. S. Bakos) Vol. 31 No. 3 US $4.00
- Photoionization of Atoms and Molecules (J. A. R. Samson) Vol. 28 No. 4 US $5.00
- The interaction of atoms with polarised light (D. ter Haar, Oxford, F. K. Lamb, Urbana). Vol. 2, No. 4. US $5.00
- Quantum theory of electromagnetic fields interacting with atoms and molecules (S. Stenholm, Helsinki). Vol. 6, No. 1. US $6.00
- Frequency shifts in emission and absorption by resonant systems of two-level atoms (R. Friedberg and S. R. Hartmann, New York, J. T. Manassah, Princeton and New York). Vol. 7, No. 3. US $6.00
- High resolution spectroscopy with lasers (W. Demtröder, Kaiserslautern). Vol. 7. No. 5. US $5.00
- Peturbation of spectral lines by atomic interactions (W. Behmenburg, Dusseldorf and F. Schuller, Sevres). Vol. 12, No. 4. US $5.00
- Atomic physics with ion accelerators-beam-foil spectroscopy (I. Martinson, Stockholm and A. Gaupp, Berlin). Vol. 15, No. 3. US $5.00
- The radiation of atomic negative ions (H. P. Popp). Vol. 16, No. 4. US $5.00
- Electron scattering from atoms, nuclei and nucleons (G. B. West). Vol. 18, No. 5. US $5.00

A full listing of all 180 reports is available upon request from the publisher.

NIELS BOHR Collected Works

Announcing the publication of Volumes 2, 3 and 4:

Volume 2:

Work on Atomic Physics (1912-1917)

edited by ULRICH HOYER

1977 about 700 pages
Prepublication/Subscription price: US $ 101.95/Dfl. 250.00

This volume deals with the years 1912-1917 when Bohr was at his most creative, conceiving revolutionary new ideas on absorption phenomena and on atomic and molecular physics. The published papers, extensive manuscript material and the correspondence from this period give some idea of the intensity of Bohr's concentration and the rigour of logic which led him to his conclusions. They also document the amazing amount of painstaking work he conducted singlehandedly to consolidate the foundations of his theory and determine its consequences.

CONTENTS: Part I. Absorption of Charged Particles. II. Constitution of Atoms and Molecules. III. Consolidation of the Quantum Theory of the Atom. IV. Selected Correspondence (1912-1917).

Volume 3:

The Correspondence Principle (1918-1923)

edited by J. RUD NIELSEN

1976 xii + 702 pages
Price: US $ 112.25/Dfl. 275.00
Subscription price: US $ 95.95/Dfl. 235.00

With the publication in 1918 of the treatise "On the Quantum Theory of Line Spectra", Bohr initiated a new period in the development of the quantum theory, which lasted roughly until the end of 1923. During this period, his research had a double aim: to develop a consistent and adequate quantum theory and to explain the structures and properties of the elements of the periodic system.

This volume contains the papers and manuscripts dealing mainly with the elaboration of the general quantum theory. It is the third of an 8-volume edition of the Collected Works of Niels Bohr. This edition will not only provide historians of science with a serviceable tool, it will give those who value the spirit of science easy access to a life-work entirely devoted to the rational analysis of the laws of nature and of the singular character of their meaning for us.

CONTENTS: Part I. The Correspondence Principle. Part II. Selected Correspondence (1917-1923).

Volume 4:

The Periodic System (1920-1923)

edited by J. RUD NIELSEN

1977 x + 764 pages
Price: US $ 120.45/Dfl. 295.00
Subscription price: US $ 101.95/Dfl. 250.00

Niels Bohr's contributions to our knowledge of the atomic constituents of matter and to our view of science and other concerns, remain of fundamental importance to all engaged in the vast dicipline called "physics". The influence of his work, of his approach to research, both practical and theoretical, is widely felt today.

This is the fourth of eight books on the works of Niels Bohr, and covers the years from 1920 to 1923. The bulk of material resulting from his work during this period was so great that it was necessary to publish it in two separate volumes. Whilst the previous book - Volume 3 - deals primarily with the development of quantum theory this volume contains the papers and manuscripts treating the application of the theory to the problem of atomic structure, and the explanation of the periodic system of the chemical elements.

CONTENTS: Part I. Atomic Structure. Part II. Selected Correspondence (1920-1924).

Previously published:

Volume 1:

Early Work (1905-1911)

edited by J. RUD NIELSEN

1972 xlviii + 608 pages
Price: US $ 91.50/Dfl. 225.00
Subscription price: US $ 77.75/Dfl. 190.00

This is the first volume of a comprehensive, critical edition of Niels Bohr's works. In addition to his published papers, it includes unpublished manuscripts and a wide selection of letters and other documents, with explanatory introductions and notes by the editor of each volume. A special feature of the Collected Works is that any documents originally written in languages other than English are presented in both the original language and in English.

A detailed brochure on NIELS BOHR, COLLECTED WORKS is available from the publisher. Please apply for full details on the subscription scheme

Theory and Practice of MO Calculations on Organic Molecules

by **I.G. CSIZMADIA,** Department of Chemistry, University of Toronto.

PROGRESS IN THEORETICAL ORGANIC CHEMISTRY, Vol. 1.

1976 x+378 pages US $38.50/Dfl. 100.00 ISBN 0-444-41468-1

Current chemical theory is based on approximate quantum mechanical treatments and especially molecular orbital methods. In recent years, the theory has been developed to the point where quantitative calculations can be made on many physical properties of molecules and interacting molecular systems.

This book provides an introduction to rigorous *ab initio* molecular orbital calculations for the experimental organic chemist. The necessary mathematics and quantum mechanics are reviewed as background for the experimentalist wishing to begin theoretical work. The Hartree-Fock method for both open and closed shell molecules is derived in detail. Results of many recent theoretical studies are included to illustrate the practical application of molecular orbital theory to problems in organic chemistry.

This book should be of particular value to the experimental organic chemist interested in beginning MO calculations related to his research interests. It would serve as a text for a course in Theoretical Organic Chemistry and as a useful supplementary text in courses on Physical Organic Chemistry and Molecular Quantum Mechanics. This text provides an excellent introduction to theoretical organic chemistry for the experimental organic chemist.

CONTENTS: **A. Introduction.** I. Introductory Remarks. II. Mathematical Introduction. III. Quantum Mechanical Background. **B. Theory of Closed Electronic Shells.** IV. Non-Empirical or Hartree-Fock MO Theory. V. Semi-Empirical MO Theories. VI. Excited and Ionized States in the Framework of Closed Shell MO Theories. VII. Hybrid Atomic Orbitals (HAO) and Localized Molecular Orbitals (LMO). VIII. Limitations of Molecular Orbital Theories. IX. Applications of MO Theory to Closed Shell Problems. **C. Theory of Open Electronic Shells.** X. Open Shell SCF Theories. XI. Limitations and Applications of Open Shell SCF Theories. **D. Practical Aspects of MO Computations.** XII. Basis Sets for Molecular Orbital Calculations. XIII. Information on Selected Computer Programs. XIV. Closing Remarks. **E. Appendix.** XV. Detailed Formalisms of Roothaan's SCF Theories.

Studies in Statistical Mechanics, Volume VI:

The Kind of Motion We Call Heat

A History of the Kinetic Theory of Gases in the 19th Century

by **STEPHEN G. BRUSH,** University of Maryland, College Park.

Book 1: Physics and the Atomists

1976. xl + 300 pages. Price: US $24.75/Dfl. 70.00 ISBN 0-7204-0370-7

Book 2: Statistical Physics and Irreversible Processes

1976. xiv + 496 pages. Price: US $59.75/Dfl. 165.00. ISBN 0-7204-0482-7

Price per 2-volume set: US $75.00/Dfl. 210.00.

This two-volume work provides a particularly comprehensive account of the development of kinetic theory and statistical mechanics up to the beginning of the 20th century.

The author's historical researches have gone far beyond any other books on the subject, filling in many more details and putting the history of kinetic theory in the context of 19th century scientific and intellectual history. In the course of detailed examination of the sources, both published and unpublished, the author has been able to throw much new light on the dynamics of scientific change, and to refute some generally accepted ideas about historical events. In one section of the work, he demonstrates the use of a kind of historical document which has rarely, if ever, been exploited by historians of science, namely, referee's reports.

The work is primarily directed towards physicists, but as it is not only concerned with technical aspects of the history of physics but also deals with cultural and philosophical connections, it will appeal to historians of science, and the discussion of Mach's attitude towards atoms will no doubt interest philosophers. Book 2 is completed by an unusually comprehensive bibliography.

CONTENTS:

Book 1 - Part A. Introductory Survey. I. The Kinetic Theory in the History of Physics. Part B. Personalities. II. Herapath. III. Waterston. IV Clausius. V. Maxwell. VI. Boltzmann. VII. Van der Waals. VIII. Mach.

Book 2 - Part C. Problems. IX. The Wave Theory of Heat. X. Foundations of Statistical Mechanics 1845-1915. XI. Interatomic Forces and the Equation of State. XII. Viscosity and the Maxwell-Boltzmann transport theory. XIII. Heat Conduction and the Stefan-Boltzmann Law. XIV. Randomness and Irreversibility. XV. Brownian Movement. Part D. Bibliography. XVI. The Literature of Kinetic Theory. Index.

"... A beautifully written introductory survey of the place of the kinetic theory in the history of physics, and a detailed bibliographic survey of primary sources have been added to produce a staggeringly complete and lucid picture of the entire subject..."
"... This work is to be thoroughly recommended. It deals not only with the technical aspects of the history of an important area of physics but also shows the important connections it has with philosophy and culture. It deserves to sell well..."
Physics Bulletin

"... In these and other examples, Brush does a great service to the history of science by emphasizing the confused state of developing concepts in physics..."
Science

"... No-one will read Dr. Brush's account without having his horizons widened and his detailed knowledge of the history of the subject immeasurably inceased..."

SCOPE:
The JOURNAL OF MAGNETISM AND MAGNETIC MATERIALS is designed to encourage greater interaction between the basic and applied sub-disciplines of magnetism. The entire spectrum of topics, from basic science to the technology and application of magnetic material, is covered. In addition to more traditional publications, timely review articles and a rapidly published "Letters to the Editor" is featured.

INVITATION TO AUTHORS:
The editors invite original contributions on all aspects of fundamental and applied problems in the study of magnetism and magnetic materials. Contributions should be submitted preferably to one of the editors or to a member of the Editorial Advisory Board who is familar with the research presented. "Instructions to Authors" are available from the publishers. There is no publication charge, and 25 reprints are provided free of charge.

SUBSCRIPTION INFORMATION:
1978. Volumes 7-9 will be published in 12 issues.
Subscription price (3 volumes):
US $222.00/Dfl. 510.00 including postage.

Journals are automatically sent by air to the U.S.A. and Canada at no extra cost, and to Japan, Australia and New Zealand with a small additional postage charge.

Free specimen copies are available from the Publisher.
